

EZY RUN 460 BALING TWINE

Ezy Run 460 is one of the signature Twines of the Donaghys range and has been a favorite over many years for general purpose Large Square Baling.

Ezy Run 460 encompasses three qualities, strength, softness & long running length per spool. Gentle on the knotter mechanism, combined with a longer running length and knots that tie off and hold, Ezy Run 460 is a leader in the Large Square Bale Twine market.

USAGE AND APPLICATION

Designed for strength plus softness with longer running length, Ezy Run 460 is a number one choice for use in all modern conventional Large Square balers, offering a general purpose twine for pasture & Cereal Hay, or Silage.

Suitable for both the Contractor and Farmer/End-user, Ezy Run 460 will save on baler wear & tear and down time re-loading.

FEATURES AND BENEFITS

- Superior Knot holding
- Smooth run through baler, reducing wear on Knotter equipment
- Extra Length spools, resulting in extra bales pressed per spool
- Less packs twine required per load for more bales pressed
- Designed for Australian conditions with 12 Month guarantee against UV degradation
- Average Runnage of 132m/kg

FAQ'S

- Is Ezy Run 460 Big Square suitable for baling Cereal & Pasture Hay & Silage?

Yes it's suitable for baling all cereal & Pasture hay's and Silage in all Conventional Large Square Balers.

- Is Ezy Run 460 Big Square suitable for baling Straw?

Ezy Run 460 is not recommended for baling straw however is often used in combination with Topknot being used on the outside strings for stronger holding capacity. Or can be used on lower pressure settings.

- Will I have to adjust my knotter's in the baler if I change my twine?

There may be a need to adjust the knotter settings if using different thickness of twine.

FAQ'S

- Is the colour of the Twine important?

The addition of coloured master batch can change the characteristics of the polymers. However, all colours from the Integrated Packaging Twine range are suitable for baling in Australian conditions. Some colours are preferred by consumers more than others due to visual requirements such as visibility in certain crop types, night baling or end-users requirements.

- Do I need to run a higher strength twine on the outside Knotters of my Baler?

This is an option to reduce the need for higher strength twine across the whole Knotters, but can depend on crop type and conditions of crop being baled.

- Are the thicker, stronger Twines more abrasive on my knotter mechanism?

Twines that are thicker are often harsher and cause wear on both twine guides & Knotter parts.

- Is Ezy Run 460 suitable for Large Square High Density Balers?

Ezy Run 460 has been designed for baling in standard LSB balers. IP have other high performance twines available for High Density baling.
